LUCKY ARCHIBONG

Software Engineer

luckyarchibong.e@gmail.com | luckyarchibong.vercel.app | github.com/luckys-lnz | linkedin.com/in/luckyarchibong

SKILLS

Languages and frameworks: TypeScript, JavaScript, Python, SQL, C, Node.js, Next.js, React, FastAPI, Flask, Tailwind CSS
Data and infrastructure: PostgreSQL, Supabase, Redis, Drizzle ORM, SQLAlchemy, BigQuery, Docker, Linux, Vercel, HAProxy, Datadog, Git
Practices: REST APIs, webhooks, payment integrations (IntaSend, M-Pesa, Paystack), job queues, CI, Vitest, Playwright

EXPERIENCE

Founder and Software Engineer | Archomak — Apr 2025 – Present

Sikakoraa (sikakoraa.com): booking marketplace with mobile-money deposits and payouts.

- Made payments crash-safe, so a server crash or a repeated webhook can't lose or double-apply a deposit: events are stored before processing and settled in one locked Postgres transaction.
- Built M-Pesa and bank payouts that retry automatically but never pay twice, using a state machine that fixes the amount up front and only retries when no money could have moved.
- Moved email and notifications out of the request path into a Postgres job queue with leases and safe retries, so a slow or failing email provider no longer breaks bookings.
- Prevented overbooking under concurrent requests with database-level capacity checks and locks, and recorded every booking change in an audit log.
- Evaluated payment providers for partial deposits and Kenyan coverage, and migrated the product from Paystack (Ghana) to IntaSend (Kenya). Set up CI with type checks, unit and end-to-end tests.
- Built Kunanyesha: weekly weather reports for all 47 Kenyan counties from GFS forecast data (Next.js, FastAPI, GeoPandas).

Web Developer (Contract) | jobmatch — Sep 2024 – Apr 2025

- Built and improved user-facing features for a job matching platform.

Web Developer (Contract) | Offside — May 2024 – Aug 2024

- Designed and built the responsive marketing website for a Canadian pitch-booking startup in Webflow, with custom JavaScript.

Web Developer (Part-time) | Motito — Aug 2021 – Mar 2022

- Raised the Lighthouse performance score by 45% by optimizing images, reducing bundle size and lazy loading.
- Built operational dashboards with JavaScript, SQL, BigQuery and Retool.

Web Developer and UI/UX Designer | TheDevBuild — Dec 2020 – Oct 2021

- Designed product interfaces in Figma and Adobe XD, then built them as responsive web pages.

PROJECTS

Task Master | task-master-quick.vercel.app — Next.js, PostgreSQL, Supabase Realtime

- Task manager with live sync across devices, shared tasks, push reminders, and a prompt that asks why after a task is postponed three times.
- Fixed a runaway loop that kept creating duplicate recurring tasks by making task completion a single atomic update.

Forest | forestpip.vercel.app — Next.js, React, TypeScript

- Picks a dinner for two people's moods using a geometric-mean ranking, so one partner's strong dislike outweighs the other's enthusiasm. Prices are recalculated on the server at checkout.

Also: multithreaded web crawler in C with Redis and PostgreSQL; real-time chat over WebSockets in Node.js

EDUCATION

ALX | Software Engineering Program — Feb 2024 – Feb 2025

Accra Institute of Technology | BSc Computer Science
