LUCKY ARCHIBONG

luckyarchibong.vercel.app · GitHub · luckyarchibong.e@gmail.com

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL
Frontend: React, Next.js, HTML5, CSS3, Tailwind CSS
Backend: Node.js, Flask, REST APIs
Databases: PostgreSQL, SQLAlchemy, Firebase, BigQuery
Infrastructure: Linux, Docker, HAProxy, Datadog, Vercel
Tools: Git, GitHub, Retool

EXPERIENCE

Freelance Software Engineer — Remote | Jan 2024 – Present

- Built backend APIs and integrated payment gateways and external APIs.
- Took client projects from requirements and planning through deployment.
- Used Git feature branches and pull requests for development and review.

Software Engineer Trainee — ALX Software Engineering — Remote | Feb 2023 – Feb 2025

- Built REST APIs and backend services with Python, Flask, and SQLAlchemy.
- Designed relational database models and configured Linux deployment environments.
- Configured HAProxy for load balancing and Datadog for system monitoring.
- Used Puppet for server automation.

Web Developer — Motito — Remote | Aug 2021 – Mar 2022

- Increased Lighthouse performance score by 45% through image optimization, bundle reduction, and lazy loading.
- Built operational dashboards using JavaScript, SQL, BigQuery, and Retool.

UI/UX — TheDevBuild — Remote | Mar 2020 – Nov 2021

- Collaborated with team members to build products Designs using AdobeXD and Figma.

PROJECTS

Sikakoraa — Booking & Payments Marketplace
Next.js · TypeScript · PostgreSQL · Paystack

- Designed a booking lifecycle that coordinates scheduling, payment collection, confirmation, service completion, and settlement across multiple parties.
- Implemented multi-role account logic for businesses acting as both service providers and customers, including business rules preventing self-bookings.
- Evaluated payment providers against application requirements including partial-payment workflows and regional payment support.

Kunanyesha — Weather Intelligence Platform
Next.js · TypeScript · Python · Weather APIs

- Built Python backend API services to collect, process, and transform external weather data into standardized operational reports.
- Built Next.js and TypeScript dashboards for weather visualization, report generation, and user interaction.

EDUCATION

Accra Institute of Technology — BSc Computer Science
