SKILLS

Programming Languages: TypeScript, JavaScript, Python, SQL, C

Frontend: React, Next.js, HTML5, CSS3, Tailwind CSS, SCSS, jQuery, Angular

Backend: Node.js, Flask, REST APIs

Databases: SQLAlchemy, Firebase

Tools & Platforms: Git, GitHub, Docker, Linux, HAProxy, Datadog, Vercel, Webflow, WordPress, Retool, Figma, Webpack

Development Practices: Responsive Design, Performance Optimization, API Integration, Agile, Version Control, System Design

EDUCATION

Accra Institute of Technology (AIT)

Bachelor of Science in Computer Science

EXPERIENCE

Freelance Software Engineer

Jan 2024 – Present

Remote

- Built scalable backend APIs and integrated third-party services, including secure payment gateways and external APIs.
- Collaborated directly with clients to translate business requirements into technical solutions and oversee projects from planning through deployment.
- Managed product development through modern Git workflows, utilizing feature branches, pull requests, and version control best practices to deliver maintainable, production-ready software.

Software Engineer Trainee

Feb 2024 – Feb 2025

ALX Software Engineering

Remote

- Developed full-stack applications using Python, Flask, and SQLAlchemy, designing RESTful APIs, backend services, and relational database models.
- Configured Linux-based server environments to support reliable application deployment and backend services.
- Implemented infrastructure tooling including HAProxy, Datadog, and Puppet to support load balancing, system monitoring and server automation.

Web Developer

Mar 2023 – Nov 2023

TheDevBuild

Remote

- Collaborated closely with designers and developers to build intuitive, user-focused interfaces for the company's products while leading the development of responsive websites for startups and local businesses.

Web Developer

Aug 2021 – Mar 2022

Motito

Remote

- Increased Lighthouse performance score by 45% through image optimization, bundle reduction, lazy loading.
- Built internal dashboards using JavaScript, SQL, BigQuery, and Retool to improve visibility into operational data.
- Collaborated directly with clients to translate business requirements into scalable software solutions, leading features from discovery through implementation.

PROJECTS

BOOKANDPAY GH | Marketplace platform that enables service businesses to manage bookings, accept customer payments, and streamline appointment scheduling through a secure, non-custodial payment model.

- Architected the booking lifecycle by designing workflows for scheduling, payment collection, booking confirmation, and service completion.
- Designed a deposit-based payment architecture that enables businesses to collect booking commitment fees while keeping payment settlement between customers, businesses, and the payment provider.
- Implemented multi-role account management, allowing businesses to operate as both service providers and customers while enforcing business rules that prevent self-bookings.
- Evaluated multiple payment providers against platform requirements for partial escrow and regional support, selecting IntaSend to deliver a scalable payment solution for the Kenyan market.

KUNANYESHA | A weather intelligence platform that provides localized forecasts to support operational planning and decision-making.

- Developed standardized reporting workflows that convert meteorological data into professional reports ready for operational planning and institutional decision-making.
- Built Python backend services responsible for weather data collection, processing, and forecast generation.
- Built responsive dashboards using Next.js and TypeScript for weather visualization, report generation, and user interaction.
- Deployed the platform to production while continuously improving forecast processing and reporting workflows.
